

## TECHNICAL REQUIREMENTS

### **Printed Lanyards, bagstraps, wristbands and keyholders**

- Vectorial format file (.pdf - .ai - .eps) containing the logo or the inscription which must be reproduced on the strap, together with some examples of repetition.  
Files in JPEG or TIFF (min. resolution 300 dpi) are accepted, too.
- Specify the Pantone colours (series C) of the logo or - inscription of the strap.
- You must send us executable files ready for printing. We do not do works of graphic composition.

### ***Embroidered Lanyards, wristbands and keyholders***

- We need a JPEG file containing the logo or the inscription which must be reproduced on the strap, together with some examples of repetition.
- In the order, you must specify the required distance for the repetition between one inscription or logo and the other.
- Specify the Pantone colours (series C) of the logo or – inscription of the strap.
- The embroidered strap allows the realisation of simple inscriptions and logos; we can't assure you the precision of fonts or logos.
- Yarns are already dyed, therefore we will use the yarn that is more similar to the Pantone colour which is given to us as reference.
